

The chart displays the performance of eleven models over a period of 100 days. The models are represented by lines of different colors and thicknesses, corresponding to the legend on the left. The models are: 10 (dark blue), 30 (medium blue), 60 (light blue), 90 (very light blue), 120 (lightest blue), 150 (light orange), 252 (orange), 504 (dark orange), 756 (red-orange), 882 (red), and SnP500 (black). The chart shows a general upward trend for all models, with a significant spike in performance for the 882 model around the 100-day mark. The 882 model reaches the highest performance level by the end of the period, followed by the 756 and 504 models. The SnP500 model shows a steady increase in performance, but is outperformed by the other models towards the end of the period. The models with lower values (10, 30, 60, 90, 120, 150) show a more gradual increase in performance and remain at lower levels than the other models.
